College Student

OOPS

Proper structure of the code

makes your code easy to Read & work

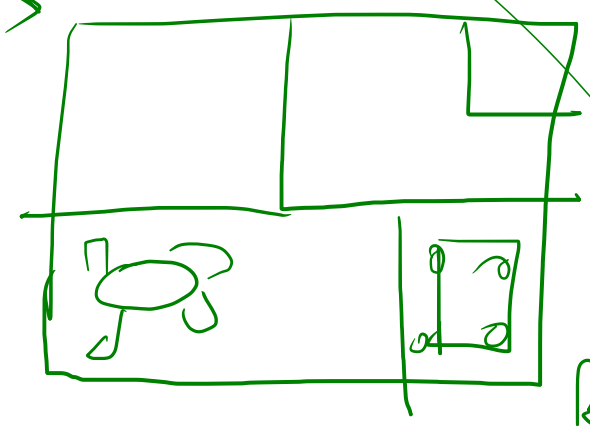
Reuseable piece of code.

2 months

Template
class
{ }

House

Blueprint



It defines:

- number of Rooms
- doors
- color.

But it is not a actual house.

OOPS

Classes

Blueprint to create object

Objects:

Real instance/object created from class.

An object is a real instance created from class.

Object (Actual)

whenever i will call Myclass it will print 5

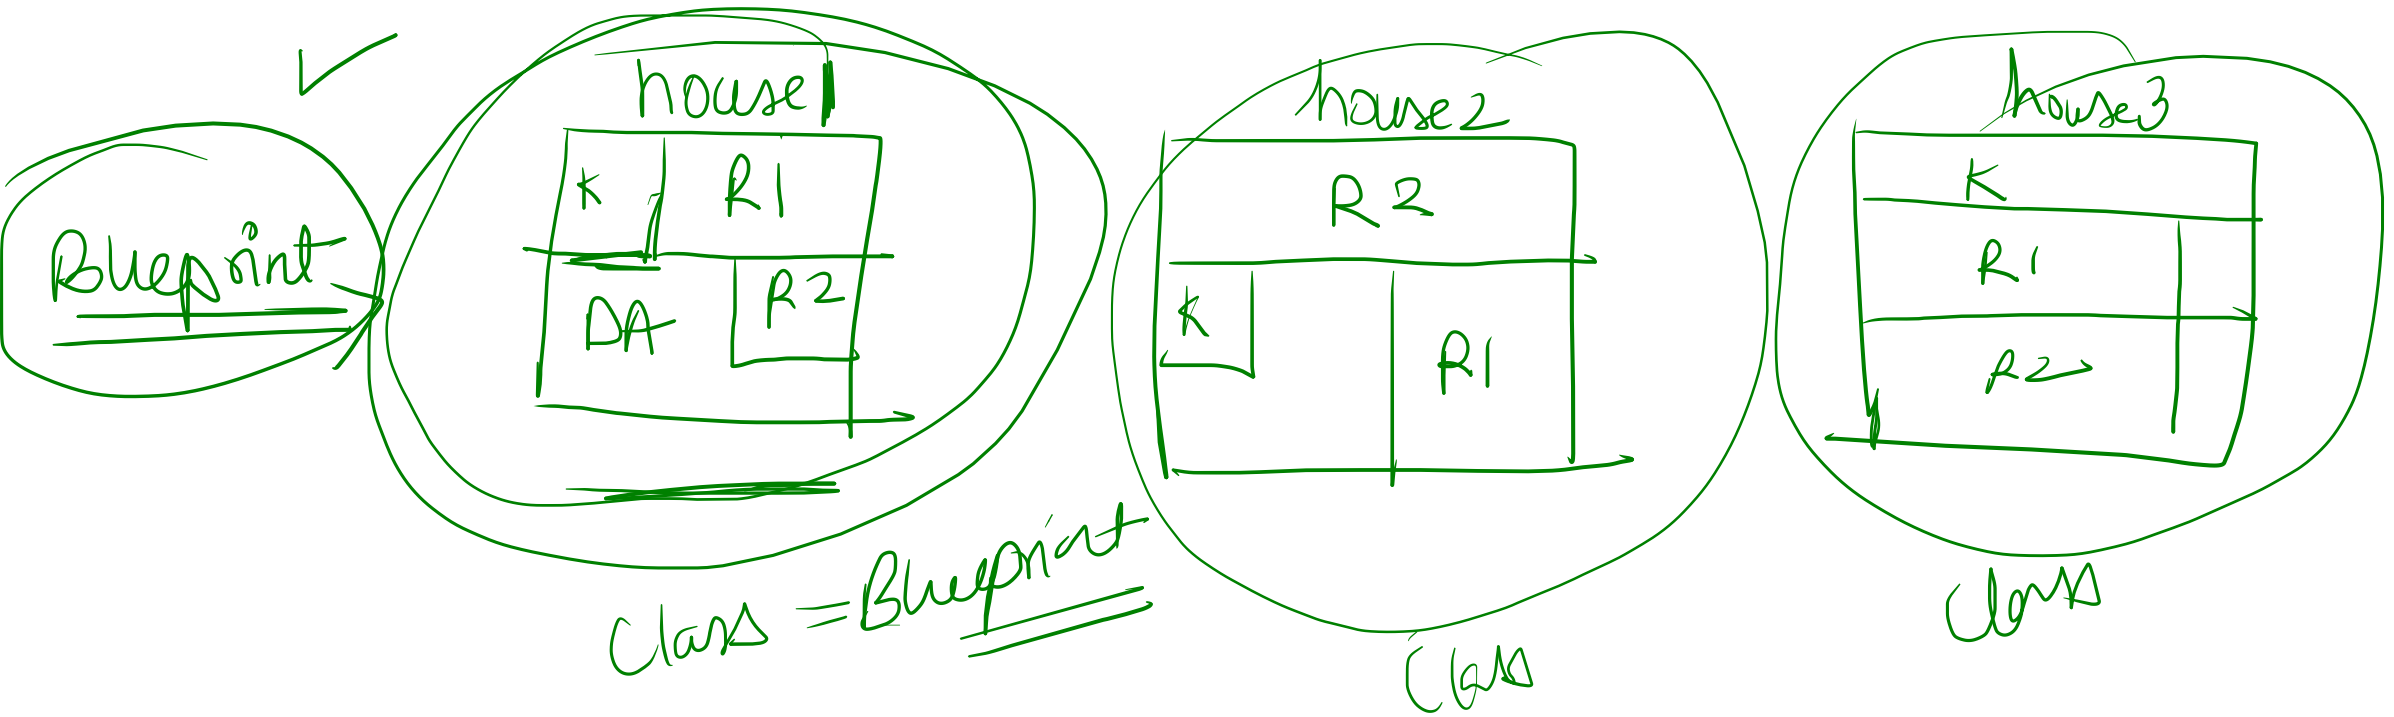
class Myclass:
print(5

Blueprint

Class House1:
Room - 2
kitchen - 2
washroom - 3

Blueprint

Call the House1 as object



akshat → Call the class house2 and create object for akshat

virat → Call the class house1 and create object for virat

actual house

Real time

Class str :

Method → 1 → upper

↳ code

Method 2 → lower

↳ code

Method 3 → trim()

↳ code

Strings

name = "akshat"

y = name.upper()

Method upper

z = name.lower()

(strip())

↳ Methods

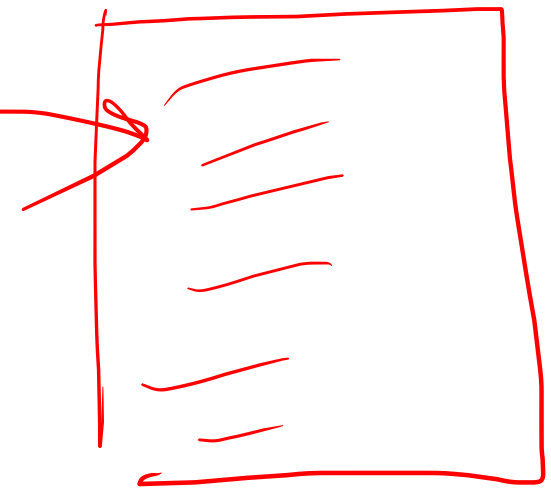
File Handling

→ Open

csv

function

Python



Read (r)

Write (w)

Append (a)

Create (x)
