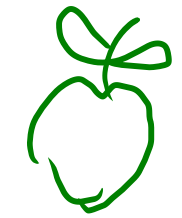
Why python is required in AI??

1. Simple to learn → Python is like eng language.
2. Powerful AI Libraries
   - Numpy
   - Pandas
   - Scikit learn
   - Tensor flow
   - ⋮
3. used by Big companies.
4. Data handling — AI System learns from large dataset.
   - Python
     - Clean data
     - analyse data
     - train models

Data science with python certification.



A → Apple

Concepts

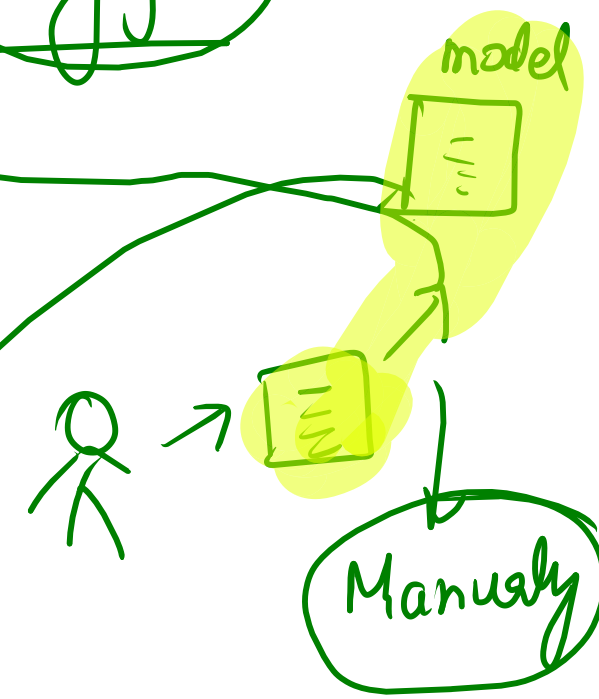
Collect data
analyze data
prediction.

Wallmart

50 million

5 million → Baby food

Diapers
Clothes.
Toys



Python

module 3

Job

variable stores data

Variable

name = "Akshat"

variable

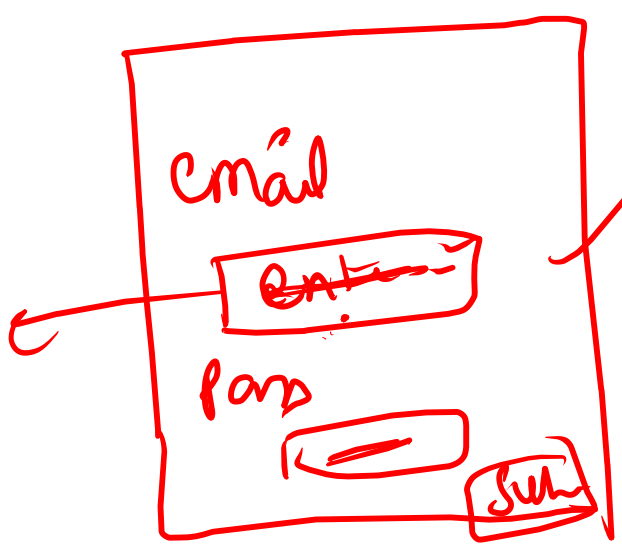
value.

print(name) ⇒ o/p Akshat o/p.

value which is associated with variable

print ("name") ⇒ name

Netflix



email_id = input ("enter email")

pass = input ("enter pass")

print (email_id)

o/p akshat@gmail.com

"Hi akshat, we are learing python"
'Hi akshat, we are learing python'

} → string

print ("Helio")

```python
## for loops
a = "hello world"
for i in a:
    print(i)
```

a consist of string

Python → Sequence of character

Take each character from string one by one.

Take each character from "a"

print each character in new line.

Index	character	i
0	h	1
1	e	2
2	l	3
3	l	4
4	o	5
5	space	6

= a[0]

a[1]

Slicing in python

name = "akshat lets learn"

0 1 2 3 4 5 6

print only akshat

print (name [0]) = a

print (name [0:6]) = akshat

0 1 2 3 4 5 6

a = 0
k = 1
s = 2
h = 3
a = 4
t = 5

Time approx

- → if else statement
- → Loops
  - while
  - for loop

```
#####  python string Method
# text = "hello world"
# print(text.upper())
# print(text.replace("hello", "hi"))

### python string function
# text = "hello world"
# print(len(text))
# print(max(text))
```

Python string methods

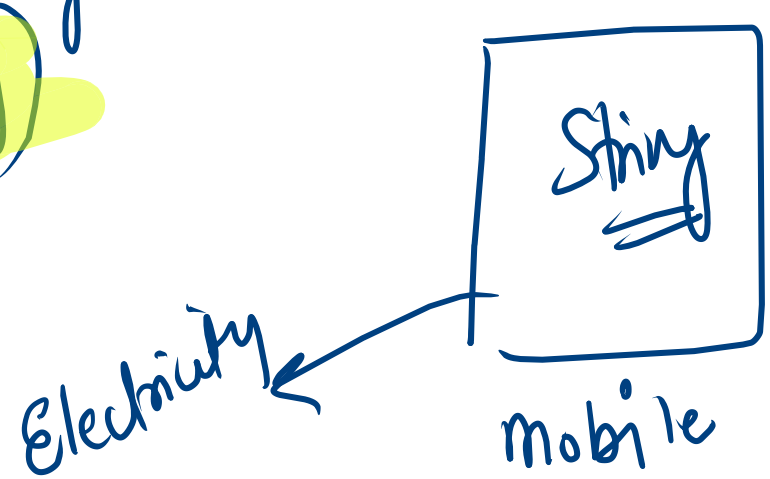
Python string functions.

functions that belong to the string object itself.

string.method()

functions are not attached to the string.

function(string)



Methods → features which is inside the phone.

Camera, gallery, Bluetooth.
